

Product documentation

You would like to have detailed information regarding our products, ...

Product catalogue

A qualified representative is just a phone call away. Or send us an email or fax. We have our entire product range available for you in catalogue form.

Product CD

Do you prefer a digital format? Simply order our product catalogue on CD.

Downloads

Stay up to date with RAPHA product advancements! In our download section on our website you can view all the documents from our product catalogue and print them out. New product alerts are also available via email.

Consulting

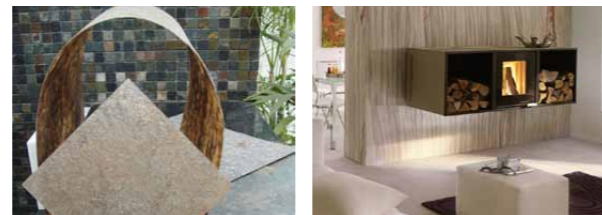

In the event we do not list the specific product you are looking for, please inform us. We specialize in providing the right 3-D Product solution for you and your company's needs.

RAPHA Stone – the flexible natural stone

Rapha Systems of Austria is pleased to introduce a new flexible slate "vener". This 1-2 mm thin, flexible natural stone opens up exciting new design possibilities for architects, and the woodworking and millwork industry. The ability to process the stone veneer with standard woodworking tools means almost unlimited possibilities for woodworkers. For example, the combination of stone and wood creates a new premium look for the furniture industry. It can be used and processed in kitchens, bathrooms and in the whole living area.

YOUR PARTNER:

We make
3-D THERMOFORMING
easy for you!

For the highest quality at
3-D Thermoforming!

Preparation

	FOIL-STORAGE-PATEROSTER			IONIZATION	
	MANUAL FOIL CUTTING DEVICE			PANEL CLEANER-RPC 800 & RPC 1300	
	FOIL UNWINDING SYSTEM WITH AUTOMATIC CUTTING DEVICE			RAPHA PLANER SOFTWARE	
For foil storage and feeding of the press with foil. Different heights and roll capacities are available		For discharging of electrostatic ionization			
Device for precision cutting of foils at the press		For product cleaning in preparation of glue applications			
For convenient and quick cutting of the foil at the press		Our flagship software for optimal lay-up pattern on the press table - it saves foil, time and energy			

Pressing process

	PIN SYSTEM STARTER			MEMBRANES - TOP QUALITY	
	PIN SYSTEM COMMISSION			PROTECTION COVER	
	PINSYSTEM SERIAL			SILICONE CORD SEAL	
For the individual setting of magnetized Pins onto a base plate		The highest quality silicone and natural rubber membranes for every membrane press (foil and veneer)			
Pins are handled in an exactly-defined course of movement		Cover for membrane-less presses (for clamping below the heating platen). These covers prevent development of wrinkles and glossiness by equally pre-heating the foil			
Pins are arranged independently from shapes. All versions used for smaller or larger outputs-instead of using dummie boards		Important spare part for reducing the energy demand (less demand = less heat loss)			

Final processing

	BRUSH AND CLEANING MACHINE TYPE RBM			CUTTING MACHINE	
	RHG HAND CLEANER			RAPHA TURNING DEVICE	
	SPECIAL TRIMMING KNIFE TYPE BS1			RFP REST-FOIL BALING PRESS	
Systems for cleaning the backside of the board and de-grating the edges after pressing		Machine for grate-free and automatic cutting of overlapping foil of 3-D products			
For easy manual cleaning of the backside of the board and de-grating the edges after pressing		For rapid unloading of the press - enables an immediate cut of overlapping foil			
For exact cuts of overlapping foil on pressed board		For rest-foil disposal in a small space			

	SPECIAL SOLUTIONS-CONSULTING			USED MACHINERY FOR 3-D MANUFACTURERS	
Unique problems are our specialty!		Paternoster, membrane presses, cleaning machines etc.
