PROTECTION FLEECE

for membranless presses

Protection-Fleece:

Consisting of 2 separate layer

1st layer : fill-fleece

2nd layer : glide-fleece

Application:

The combination of this two fleece-cloths will be stretched-in under the heating plate with it to take care of the sensitive foils at pre-heating. Also a damage of the foils will be avoided.

Advantages: The foil will be pre-heated constantly without direct contact to the heating-plate. Air-enclosing at pre-heating between the heating-plate and foil will be eliminated nearly.

Possibility of delivery:

Sample on inquiry
